

ABSTRACT OF THE DISCLOSURE

[0063] A flush poke-through fitting, with both electrical power and data communication access, includes a data jack face plate that can be replaced without disassembly of any other part of the fitting. The data jack face plate is also removable without disruption of power to the electrical outlets. Increased wiring space for flexibility in electrical outlet orientation and improved conductor organization during assembly is also provided by pins that support the electrical contacts in the electrical receptacle when assembled.
